## Prestel hacked open

Prestel has admitted that it is possible for unauthorised individuals to 'tap in' data on users whilst they are logged on to the system. One of ASD's regular contributors has discovered how to gain the information due to a problem in the opening process of British Telecom.

Using a Commodore computer and a modem he has been able to watch people using their banking society pages and logging on to the system. This means he could change the passwords of authorised users, making it impossible for them to use their own numbers to gain access in the future.

The type of unauthorised access has supposedly never happened, but has been much reported in recent weeks. It has always been extremely denied by Prestel, who even went to the extent of having one of its information providers from the victim until Timeshare withdrew allegations of illegal access.

The firm goes to the aid of

modems in this way in 'hacking' and there are a number of groups who spend a great deal of time trying to crack the codes that allow such access.

Prestel is serious in a number of ways. It has industrial users, including one inside the London Police, and a number of closed areas which hold confidential information such as details of banking society and bank accounts. Anyone watching such pages can gain a great deal of information which could be of commercial or even private interest.

Our contributor is a responsible individual and he immediately reported his access to Prestel. He is discussing with them the details and defining how access can be increased. He will be reporting on his access in the next issue of Your Commodore magazine.

A spokesman for Prestel was unable to comment on these specific allegations, but said Comshare on page 5.

# SURVIVOR

**AMSTRAD**

**BURNING** Search the haunted rooms of Dendatus Abbey for the sinister treasure left from years gone by. However, as you help Angus around the sinister building beware of the evil spirits who will chase Angus wherever he goes. As he has to defend himself in his trusty gun and poison bombs. Luckily for Angus there are various objects lying around the Abbey such as arrows and many traps, and bottles of life giving elixir. There are 1000 various rooms all presented in remarkably clear and colourful graphics with beautifully smooth scrolling screens. Ahead lies a terrifying challenge for Angus and it's up to you to help him. And you the sole survivor!

**AMSTRAD £26**

**HOUSE OF UZUR** Enter the House of Uzur at your own risk, as you may never leave again. However, once inside there is a selection of nice rooms to select. Behind each door is a totally different action packed arcade game, each of which are certain to make your nerves to the limit. If you manage to get through these nine rooms another two secret rooms (x and y) will appear, but beware the evil powers of the House of Uzur.

**AMSTRAD £26**

**FLIGHT PATH** Flight Path is without doubt the best flight simulator on the C/18 and Amstrad. The many elaborate features include: Autometer, Maps, directional headings, GPS, ground warning lights and reverse thrust to name but a few. Also included are smooth graphics as you take off, cruise over mountains, and land once again.

**AMSTRAD £40**

**IN TIME TALK** As sole survivor of the planet 'Corlilan', your quest is one of anger and revenge. The spaceship you are flying is full of the latest onboard computers and more powerful sensors. Also included are full 3D graphics to add unbelievable realism to this fantastic journey through time, heat, and beyond.

**AMSTRAD £7.95**

**MOON BUSTY** You must skillfully manoeuvre your jumping potted vehicle over dangerous moon craters as well as large boulders and menacing placed mines. Not only this but, avoid the hovering alien spaceship built to destroy you from above.

**AMSTRAD £26**

## From front page

"We're always getting claims that individuals have hacked the system. Most of these claims are nonsense and some are very silly." He quoted one example of an individual who claimed to have been hacking when all he had done was pass through a gateway.

The gateway system allows Proton users to go on to take modern banking information for public or private use. The Nottingham Building Society is one such partner which allows members of the society to use and view their accounts from home.

John Webster, NBS managing director, told HCW "I don't believe it. Nobody has hacked into our system. It took us two years to build and has now had two years of live use. We have used every hack possible and with 80 levels of security, only four or five of which are obvious to the user, nobody — but nobody — can hack us."

Mr Webster regards banking as a healthy development. "They're just individuals trying to take the system and that's a break hole in the security. We are not opened down in any way and would give them a welcome if they can demonstrate their methods and involve in me. Many of the claims sound dramatic but relate to nothing when we ask for a demonstration."

Some of these stories have been proved correct, at a Proton spokesman admitted. Several stories of a stolen wallet Proton have been proved false, however, and the company making the allegations. Trust-Tec International, has published a full withdrawal of its claims.

All claims of hacking and other unauthorized access to the system are fully and speedily investigated and very few are proved correct, but all inquiries very seriously indeed. We would be very interested to hear from any of our readers who have gained access to such databases and will pass any contacts on to the companies involved.

## It's all Greek

If you're well up on Greek mythology you'll find a brass chance to connect with Dyer's Gift from the Gods, on the Spectrum. You die as Orpheus, and your responsibility is to arrange your last father, King Agamemnon. Your task takes you to the underworld before the ending, in which you must find the Euboean shaper.

Your strength is topped with every action you perform, and, as shown in a range of nine games, these a bonus bonus and help at hand.

Gift from the Gods costs £5.95

Dyer, 6 Central St, Manchester M2 1NS

## Save your money

The Panda 3014 cassette interface is a new low-cost way of saving. Considered programs to an ordinary domestic cassette recorder. At £17.95, it means you can save money on the price of a Commodore recorder by using an ordinary cassette recorder which you may already have.

The Panda 3014 can be used with both Commodore 64 and VIC-20. It features a phase locked which enables it to cope with different types of recorder and tape speeds.

Pan International, PO Box 50, Rushborough

## Break the bank

Micro Power looks on to break the bank with its new game for the BBC micro. To be launched on 15th February, Castle Quest is a combination of arcade, adventure and strategy game type.

So arduous is the company that players will find the game difficult, that it will pay £1 to anyone who cracks the game within three months of purchase. That isn't the end of the dream on Micro Power's bank account, however.

There will be a national high score competition for all those who have cracked their point bar. But in the game, where the score just comes from the score. When you have actually cracked the puzzle you have to go on to the highest score that you can.

The score you get is based on two elements. You get a number of points for each puzzle and another which you complete satisfactorily and that can be scored by means down to accuracy, walking around the circle. That means that the player who can find the clues on point past the highest time bonus.

Four players who have cleared high scores will be moved to Leeds for a play off game at Micro Power HQ, the winner carrying off £200 of computer equipment and software.

will.

The game is played on a large graphic, screen and involves the manipulation of a small computer complete with keyboard. The screen scrolls in four directions and is very much subject to the horizontal. The card itself is filled with columns of all types from red monkeys (beholder name for a red dragon) but to watch players.

The puzzles are all quite logical and involve much time in getting out of prison before you survive. You move around and use objects in the world to solve these problems. We have to admit that even on the short screen we had there were a number of people in the office who were hooked on the game.

Look out for a full review in a future issue of HCW.

Micro Power, Northwood Ave, Shepperton, Leeds

## Thrills and spills

Indiana Jones has now made it to the small screen — Indiana Jones in the Lost Kingdom is the latest adventure for the C64 from US Gold. Meanwhile, the

American company, has licensed the game to US Gold and a game on sale in the UK for £5.95.

There are 16 levels — and no rule book. Indy's arch enemy, the Snake, is also after the treasure. Obstacles include phasing against the company, or two projects involving the rules of Indiana and the.

Each of six rooms contains a puzzle which must be solved before you can find your way out. A previous article is what you'll find.

US Gold Eagle is a special new release from US Gold. This one is an action from Indiana Jones and costs £19.95 on disc and cassette for the C64. Included in the price is a comprehensive flight manual.

US Gold Eagle is also available on Amiga disc and cassette while a Spectrum version is scheduled for the early part of this year.

There are four skill levels in this pre-fighter simulation, which features scrolling 3D graphics as seven missions are completed.

US Gold, Unit 10 The Parkway and Centre, Manning St, Birmingham B7 4LY

Gold is all at Micro Power

# TOP 20 Gallup Software

Compiled by

HCW is proud to present the Gallup software chart — the one to believe in. Gallup's reputation as a credible market research company is second to none. This software study is carried out nationwide in both independent and chain stores, on a weekly basis. This is a chart to watch out for — the one you know you can trust.

## David Brooks guides you through the hazards of BASIC

If you're ever lost even a little programming on your Commodore, you probably know that the BASIC INPUT command is the usual way of getting information from you to the computer through the keyboard. Here's the simplest program I can think of which uses this command:

```
10 INPUT "LAST NAME" :N$
20 PRINT "YOUR LAST NAME IS "N$
```

Typing in this program and running it. When the input message appears, followed by a question mark, type your last name and press the RETURN key (All the keyboard inputs required in programs in this guide should be followed by a RETURN unless noted otherwise.) Your name will be printed on the screen following the message "YOUR LAST NAME IS".

This is, indeed, very simple. Now I'm going to show that the INPUT command is full of surprises and traps for the unwary. Change line 10 to read:

```
10 "LAST NAME, FIRST NAME":N$
```

Run the program. When the input message appears, type your last name, a comma, and your first name. Now you should see the response "TEXTA, BONGARD" and your last name printed.

It's little quirk like this which are frustrating for the beginner. They make programs hard to use and will cause your friends to mutter at you "Dumb" computer. After all, you've asked it to accept a perfectly reasonable input and it has responded by reading back meaningless messages and misunderstanding what you entered.

The problem is that the INPUT command interprets commas in a special way, as a "variable separator" which divides and input variable from another. It thinks you're trying to give it more information than it is looking for, so it just ignores what is Armed with this knowledge, we can achieve the result we want for last name, first name input.

```
10 INPUT "LAST NAME,
```

# Taming the BASIC INPUT command

```
10 FIRST NAME":L$,F$
20 PRINT "YOUR NAME IS "L$,"F$
```

Try it. It works, but doesn't it seem like a lot of trouble? You might think of using some other punctuation to separate last and first names, even though computers are what you'd naturally use. Try this:

```
10 INPUT N$
20 PRINT N$
```

When you run the program and the "P" appears, type the following characters: ABCDEFGH. When this is printed you'll see only ABCDEFGH. Why? You're right, the INPUT command also interprets a colon as a variable separator. There's really no need explanation for this, but that's the way it works. A colon or a dash, on the other hand, will be accepted as part of a string variable. You can verify this by typing ABCDEFGH or ABCDEFGH as response to the "P".

Here's one more example of a potential problem with INPUT:

```
10 INPUT "TYPE ANY NUMBER":N
20 PRINT N
```

Note that there are no "P" signs after the N this time. When you run this program, it waits for if you type digits it responds in the "P" sign. (Don't forget the RETURN or the end.) But, try typing a letter instead in that case you get the message "FREDO FROM STAN" and the input prompt is repeated. This is the Commodore's rather obscure way of telling you that you've typed something it can't accept, in this case something other than a number.

If your program asks for a number with a numerical variable like N instead of an alphanumeric character with a string variable like N\$, the INPUT command will only accept numbers. Note that if

you've asked for a string variable you can accept with one or more digits, which will then be treated as alphanumeric information. But it won't work the other way around!

There are more examples of what reasonable people might consider to be failings of the INPUT command. I don't have the space to go into all of these here. It's too bad, because these problems make computers appear capricious and unreliable. If you're going to do any kind of the simplest programming, and especially if your programs are going to be used by others, you really shouldn't use the INPUT command at all.

The way around INPUT is to use GET. This command accepts one character in a time from the keyboard. Try this program:

```
10 PRINT "TYPE LAST NAME, FIRST NAME".
20 N$=""
30 GET A$,A$=" " THEN 30
40 IF A$=CHR$(13) THEN 70
50 N$=N$+A$:GOTO 30
60 GOTO 70
70 PRINT,PRINT N$
```

This may seem like a lot of trouble because you have to construct your own version of an input routine, but there are lots of advantages. First, let's look at what each line does.

**Line 10:** since there's no INPUT command with an additional prompting message, I've printed my own message telling you what to do. Note that there's no "P" automatically printed after this message, because that comes from the INPUT command.

**Line 20:** defines a string variable with nothing in it to start string.

**Line 30:** Get's a character. The computer just waits for you to do something. (Now a Return character should not be typed after responding to a GET.)

**Line 40:** if the character is a RETURN (CHR\$(13)) then go to line 70 and print the result.

**Line 50:** if A\$ isn't a RETURN, add (concatenate) it to N\$ and reset the character.

**Line 60:** goes back to the GET command.

**Line 70:** prints the results.

When you run this program, you'll notice that there's no blinking cursor, but you can type your responses anyway. Here's one additional word of warning: if you type a quote mark, your command will lock up and you'll have to turn it off to escape into it. I'll show you how to overcome these two difficulties later.

The basic advantage (and challenge) of this program is that GET doesn't try to interpret your responses like INPUT does. You have an opportunity to look at each character as it comes from the keyboard, and with a little more programming, you can accept large quantities of characters you like. The program lines would be changed between lines 30 and 40. Line 40 is one such programmed interpretation, as it tells the computer to recognize a Return as the end of your response to the input prompt message.

As another example of controlling the response to a particular character, add the line:

```
25 IF A$="X" THEN 30
```

The result is that X's entered from the keyboard are ignored. GET isn't bothered by commas, as you can see when you respond with your last name, a comma, and your first name, it doesn't read colon, either, by ignoring the instruction and just types ABCDEFGH.

Now I want to show you a particular situation where carefully thought out keyboard input is important. Suppose you're writing a menu-driven

prog are which starts something like this:

```

80 PRINT "MENU"
90 PRINT "EIGHT OPTION"
95 PRINT "SECOND OPTION"
97 PRINT "THIRD OPTION"
99 PRINT "END PROGRAM"

```

If you want to select one of these options, you have to make a choice between 8 and 4 and use the value to direct the program to the appropriate place. If you simply use INPUT to ask for an option number, there's no way to protect yourself against keyboard mistakes. For it's possible to sort out all the inappropriate responses like this:

```

40 PRINT "SELECT AN OPTION 0-4"
50 GET Z: IF Z=" " THEN 70
55 Z=VAL(Z)
56 IF Z=0 AND Z=1 THEN 40
57 Z=Z+2: GOTO 100,200,300,400
58 PRINT "INPUT ERROR. TRY AGAIN—" GOTO 50
99 PRINT "PROCESS OPTION #Z"
100 GOTO 10
200 PRINT "PROCESS OPTION #Z"
300 GOTO 10
400 PRINT "PROCESS OPTION #Z"
500 GOTO 10
505 PRINT "PROGRAM FINISHED"

```

If you try this program, you'll find that there are only two ways to terminate it: by pressing a digit from 1 to 4 (the proper response), or by pressing the RETURN/STOP key. All other keyboard inputs are ignored. Note that a Return character should not be typed after responding to the GET.

You could use INPUT instead of GET by replacing lines 50 and 70 with something like this:

```

40 INPUT "WHICH OPTION?" Z

```

I prefer to use GET because a RETURN is not needed.

Note that one of the VAL functions in line 55 converts a string variable ZCH to a numerical value for use in the GOTO command in line 56. All non-numeric characters have a VAL of zero.

Now, isn't this kind of performance what you'd really expect from a program? It's completely protected against input errors. You can even

prevent the computer from accepting input errors. You can even prevent the computer from accepting the RETURN/STOP key, if I'd show you later, but this is a pretty drastic step to take until you're sure your program is doing exactly what you want it to.

#### Solving your

##### Keyboard input problems

A CPM 64 program called KEYBOARD GET is shown in Listing 1. It consists of a short main program (lines 100-150) and a subprogram (lines 1600-1750). The subprogram is simply incorporated into your own programs; the main program is simply a demonstration of the subprogram. When you type in the program, you can turn on all the RETURN to speed up the operation, although the subprogram responds very promptly just as it is. Here's an explanation of what some of the lines do.

**Line 150:** prints a message which serves as the input prompt; and calls a subprogram to replace INPUT.

**Line 1600-1650:** FORCE is set to 400 to disable the RETURN/STOP and RESTORE functions. Make sure you really want to do this, and remember to enable these functions before leaving the subprogram (see line 1740). The FORCE to 400 gives character repeat capability so any key which is held down. This function is disabled in line 1740.

**Line 1650:** initializes the input string H to a null value. CHECK(17) points to underlines that function as a non-terminating "cursor" during the keyboard entry process. CHECK(17) is a cursor-like (backspace) command.

**Line 1660:** responds to a Return or shifted Return character by ending the keyboard input.

**Line 1680:** assigns string variables to the function keys.

If you think you'll be using certain words or other character strings frequently in your keyboard input, you can store these strings so they can be entered into the input string variable with a single keystroke. These strings are then concatenated to the input string that's being created. Preceding these functions, beginning at line 1740, are more a read but noticeable delay in keyboard response if you're a fast typist. If you don't think you'll use this part of

the subprogram, just delete line 1650 or reinsert it with a RETURN at the beginning of the line.

**Line 1670-1680:** responds to the RETURN/STOP key by treating it as a backspace key which removes character previously entered in H. You won't be able to backspace past the beginning of H, i.e. when LEN(H)=0.

**Line 1690-1700:** this is the heart of the subprogram, as it defines which characters will be allowed in H. Use the ASCII-to-character conversion codes in your user's manual as a guide. Basically, I've allowed lowercase and uppercase letters and some other printable characters, but not graphics symbols. You can restrict the range of acceptable characters in any way you choose.

**Line 1710:** prints the current character(s) in the string. Check the length (L) will have after the new character(s) have been added to it. If the

length will be more than 255, the subprogram truncates your input string at 255 characters. Note that the subprogram allows you to input strings of up to 255 characters directly from the keyboard, whereas the INPUT command is limited to 40 characters.

**Line 1720:** appends the new character(s) to H. There's a trick in appending a quote mark (CHR\$(34)) as a valid character. Once you print a quote, no error occurs in line 1710, the Commodore system goes into the "quote mode" with interesting results (You can try it for yourself by entering a RETURN in front of IF Z=CHR\$(34)... but as I mentioned previously, you'll have to turn your CPM 64 off to get control of it again.) You have to fix this by turning off the quote mode with a FORCE to 110 anytime your response to the GET is a quote mark.

**David Nowotnik,**  
HCW regular  
contributor,  
shows you how  
to loop the  
loop in machine  
code

Anyone with experience of BASIC programming will know the power and utility of FOR-NEXT loops — the ability to repeat many times over a similar sequence of operations within a few lines of programs. Loops are required for the many routines in machine code. Here are two ways of looping in Z80 machine code, with examples for the ZX Spectrum.

If you want a loop which is repeated no more than 255 times, then the Z80 command **DNZ** is the one to use. **DNZ** stands for Decrement B and Jump if Not Zero. This means that if the B register is equal to a loop counter. When the **DNZ** instruction is processed, the value in the B register is decremented (i.e. the value is reduced by one). If the new value is not zero, then the program jumps back to start of the loop. If it is zero, then the program continues with the instruction immediately following **DNZ**.

**DNZ** is a two-byte instruction: the first byte is the opcode, the second is the operand which defines the distance (in bytes) and direction of the jump in the program. With **DNZ**, you can jump forward or backwards in the program. The jump will be forward if the opcode has a value between 0 and 127. The distance of the jump, in bytes, will be the value of the opcode, you start counting from the address of the opcode immediately following **DNZ**.

For operand values between 128 and 255, the jump is backwards, as required in a loop. The distance of the jump,

in bytes, is calculated by 256 - n, where n is the value of the operand.

To use **DNZ**, the register B has to be loaded first with a number, which is the number of times you want to go round the loop. A simple assembly language example is shown in Table 1. Register B is **LD** loaded with 44, and the register pair HL is loaded with the starting address of the Spectrum's attribute file. By using a loop, the first 44 bytes of the attribute file have 180 placed into them. Check that you can see how the operand to **DNZ** is calculated in the example.

To try the example, type in the BASIC machine code loader in Table 1, SAVE it, then RUN it. Try changing the values underlined, and see the effect; this will help you understand how the routine works.

For loops repeated more than 255 times, a two-byte register has to be used as a loop counter. There is no single instruction to form a loop with a register pair, so a few lines of code are required to perform such a loop. Take a look at the example in Table 2.

The BC register pair is used as the loop counter, and this is **LD** loaded with the value of the number of decays of the loop which are required. The HL pair is again loaded with the start of the attribute file, and the attribute file is filled with the value 180 using **LD** (HL), 180 from within the loop.

# Looping the loop on the Spectrum

To perform a large loop, the BC register is first decremented. This operation does not set the zero flag when BC is zero, so we need to perform another operation to check if BC holds the value zero. This is done by the instruction **LD A,B** OR **LD A,C**. This in effect carries out a logical OR operation on the values in the B and C registers. The result of this operation can only equal zero when B=0 and C=0, i.e. when BC holds the

value zero. If BC is not zero, then the loop is repeated, otherwise, a RETURN to BASIC is performed.

The BASIC loader in Table 2 will allow you to try the example in the assembly language listing. Again, type in as SAVE it and RUN it. Also, change the underlined numbers to observe the effect. But be careful as you could crash the computer if you set too big a number in your loop counter.

| Instruction      | Byte values | Comments             |
|------------------|-------------|----------------------|
| LD B,44          | 6 64        | Set the loop counter |
| LD HL,32528      | 33 0 88     | Attribute file       |
| LOOP LD (HL),100 | 54 100      | POKE HL,100          |
| INC HL           | 35          | Next address         |
| DNZ is LOOP      | 18 251      | End of loop          |
| RET              | 201         | Return to BASIC      |

```
10 CLEAR 24999
20 LET x=30000
30 READ aa IF aa=-1 THEN GO TO 60
40 POKE x,aa LET x=x+1
50 GO TO 30
60 IF UGR 30000 THEN
100 DATA 6,64,33,0,88,54,100
110 DATA 35,18,251,201,-1
```

| Instruction   | Byte values | Comments             |
|---------------|-------------|----------------------|
| LD BC,758     | 1 0 8       | Set the loop counter |
| LD HL,32528   | 33 0 88     | Attribute file       |
| LD (HL),100   | 54 100      | POKE HL,100          |
| INC HL        | 35          | Next address         |
| DEC BC        | 11          | Decrement counter    |
| LD A,C        | 121         | Check if BC is equal |
| OR B          | 178         | to zero              |
| JR NZ to LOOP | 33 348      | LOOP if not, or      |
| RET           | 201         | RETURN to BASIC      |

```
10 CLEAR 24999
20 LET x=30000
30 READ aa IF aa=-1 THEN GO TO 60
40 POKE x,aa LET x=x+1
50 GO TO 30
60 IF UGR 30000 THEN
100 DATA 1,0,8,33,0,88,54,100
110 DATA 35,11,121,178,33,248,201,-1
```

## BBC and Reviews

**Title:** Educational Games for the BBC Micro  
**Author:** Ian Smith  
**Published by:** Micro Press  
**Price:** £2.95  
 Educational programs for the BBC, using the graphics facility

**Title:** BBC Micro Main Memory  
**Author:** Ian Smith  
**Published by:** Pico  
**Price:** £2.95  
 Computer manual for the BBC

**Title:** Available Values for the Electron  
**Author:** J.H. Appleton  
**Published by:** Pico  
**Price:** £2.95  
 The complete tables created in contrast efficient programs

**Title:** The Working Electron  
**Author:** John Brown  
**Published by:** Cambridge  
**Price:** £2.95  
 Want to put your Electron to serious use

**Title:** Getting the most from your Acorn Electron  
**Author:** Clive Wilkinson  
**Published by:** Penguin  
**Price:** £3.95  
 A comprehensive introduction to the Electron

**Title:** Giant Book of Games for your BBC Micro  
**Author:** Ian Leonard and Ian Hill  
**Published by:** Penguin  
**Price:** £3.95  
 A collection of programs, specially written for the BBC

**Title:** Getting the Most from your BBC Micro  
**Author:** Clive Wilkinson  
**Published by:** Penguin  
**Price:** £2.95  
 A comprehensive introduction to the BBC computer

## Apple II

**Title:** Challenging Programs for your Apple II  
**Author:** Michael Rosen  
**Published by:** Ianford  
**Price:** £4.95  
 A variety of programs for the Apple II.

## Oric/Astron and Oric 1

**Title:** Oric Astron and Oric 1  
**Author:** Geoff Phillips  
**Published by:** MacGraw-Hill  
**Book Company (UK) Limited**  
**Price:** £7.95  
 Advanced programming in BASIC and resident code

**Title:** Advanced Programming for the Oric  
**Author:** David Mason  
**Published by:** Macmillan and Book Company (UK) Limited  
**Price:** £7.95  
 For programmers who want to make the most of the Oric's facilities

# Micro library

**This week we bring you the first of a new occasional feature, keeping you informed of the newest computer books for all types of home micros**

**Title:** The Atlas Book of Games  
**Author:** Wyndell Ayres  
**Published by:** Micro Press  
**Price:** £2.95  
 30 games designed for the Oric/Astron

**Title:** The Oric 1 Program Book  
**Author:** Peter Apps  
**Published by:** Phoenix Publishing Associates  
**Price:** £2.95  
 30 programs for all current versions of the Oric 1

## MSX

**Title:** Starting Machine Code on the MSX  
**Author:** G F Kelly  
**Published by:** Kappa Computers  
**Price:** £2.95  
 An introduction to writing machine code programs and routines using assembly language

**Title:** The MSX Program Book  
**Author:** Peter Apps  
**Published by:** Phoenix Publishing Associates  
**Price:** £2.95  
 A collection of programs for any MSX

## Amstrad CPC 464

**Title:** Amstrad CPC 464  
**Author:** John Briggs  
**Published by:** Kappa Computers  
**Price:** £2.95  
 A book which looks in depth at the CPC 464's signal and graphics facilities

**Title:** The Amstrad Program Book  
**Author:** Peter Goods  
**Published by:** Phoenix Publishing Associates  
**Price:** £2.95  
 A selection of programs making use of colour, sound and speed

**Title:** The Working Amstrad  
**Author:** David Lawrence and Bruce Lane  
**Published by:** Sanford  
**Price:** £2.95  
 A collection of the total applications of programs

## Spectrum

**Title:** Software Projects Spectrum  
**Author:** Rudolf Smith  
**Published by:** Multicom Micros  
**Price:** £4.95  
 Not beyond a word to learn about programming for the Spectrum

**Title:** The Spectrum Operating System  
**Author:** Steve Kenney  
**Published by:** Micro Press  
**Price:** £5.95  
 Information on professional programming techniques

**Title:** ZX Spectrum White Box  
**Author:** Ian Smith  
**Published by:** Longman Computer Books  
**Price:** £2.95  
 Programming projects for children, up to 16 and onwards and their parents

**Title:** Spectrum Superstart  
**Author:** Richard D Hedley  
**Published by:** Micro Press  
**Price:** £2.95  
 15 supergames specially designed for the Spectrum

## Riscale QL

**Title:** Mathematics for the Riscale QL  
**Author:** Con Smyth  
**Published by:** Sanford  
**Price:** £4.95  
 An explanation of mathematical notation for the QL

**Title:** Ten Minutes's QL Games Compendium  
**Author:** Tim Marshall  
**Published by:** Ianford  
**Price:** £2.95  
 Listings for over 10 complete games and plans to read your own

**Title:** QL Assembly Language Programming  
**Author:** Colin Oyle  
**Published by:** MacGraw-Hill Book Company (UK) Limited  
**Price:** £12.95  
 Provides basic material with reference to the QL's architecture and operating system

**Title:** QL SuperBASIC  
**Author:** John Wilson  
**Published by:** Micro Press  
**Price:** £5.95  
 A programmer's guide to writing advanced programs in our own words

**Title:** The QL Book of Games  
**Author:** Richard D Hedley and David D Vogg  
**Published by:** Micro Press  
**Price:** £5.95  
 Start your own game library with this collection of pocket games

## Connectors 44

**Title:** Introduction your Commodore 64  
**Author:** P K McBride  
**Published by:** Longman Computer Books  
**Price:** £2.95  
 An introduction to programming for Commodore 64 users

**Title:** Commodore 64 Game Manual  
**Author:** P K McBride  
**Published by:** Longman Computer Books  
**Price:** £2.95  
 All kinds of games for the Commodore 64

**Title:** Turbocharge your Commodore 64  
**Author:** Peter Woods  
**Published by:** Longman Computer Books  
**Price:** £3.95  
 A guide to better programming for the Commodore 64 user

**Title:** Arcade Games for your Commodore 64  
**Author:** Steve Hale  
**Published by:** Comp/Addison-Wesley  
**Price:** £4.95

Arrange games with either joystick or keyboard control

**Title:** Incredible Utilities for your Commodore 64  
**Author:** Chris Embley and Bob Taylor  
**Published by:** Pico  
**Price:** £3.95

Toolkit of programming aids, BASIC enhancements and other utilities

**Title:** Getting the Most from your Commodore 64  
**Author:** Simon Patten  
**Published by:** Pitman  
**Price:** £3.95

A comprehensive guide to the Commodore 64 for beginners

**Title:** Great adventures on your Commodore 64  
**Author:** Chris DeForest and Robert Young  
**Published by:** Interface Publications  
**Price:** £3.95

Creating and playing adventure games on the Commodore 64

**Title:** Basic Programming for your Commodore 64  
**Author:** Henry Mullish and Don Bryant  
**Published by:** Pitman

**Price:** £3.95  
Use your Commodore 64 to the full and improve your programming

**Title:** Great Book of Games for your Commodore 64  
**Author:** Tim Harrell  
**Published by:** Pitman  
**Price:** £3.95

A wide variety of games for the C64 64

## VIC-20

**Title:** Advanced Programming on the VIC-20  
**Author:** Mark Whitmore  
**Published by:** Interface Publications  
**Price:** £4.95

Complete your own programs, produce full screen displays on your VIC-20

**Title:** Using your VIC-20 as a Micro Speechwriter  
**Author:** Paul Copeland  
**Published by:** Interface Publications  
**Price:** £3.95

How to use your VIC-20 as a word processor

## Commodore 64 and Commodore Plus/4

**Title:** The Commodore C16/Plus/4 Companion  
**Author:** Brian Lloyd

**Published by:** Samsone  
**Price:** £3.95  
Programming for the complete beginner

**Title:** The Working Commodore Plus/4  
**Author:** David Lawrence  
**Published by:** Samsone  
**Price:** £3.95

Solid applications programs to run over and over again

**Title:** Commodore Plus/4 Adventures  
**Author:** Mike Gane  
**Published by:** Samsone  
**Price:** £3.95  
Creating and playing adventure games on the C64 Plus/4

# You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets our standards, please submit it to us for consideration for publication.

- Programs must always be sent on cassettes. Utilities are helpful, but not necessary. Check carefully that they are bug-free, include details of what your programs does, how it works, variables you have used and names on convention.
- Articles on using home computers should be no longer than 1,000 words. Don't worry about your writing ability — just try to keep to the style in the articles most likely to be published will help our readers make better use of their money by giving useful ideas, possibly with programming examples. We will convert any sketches or illustrations into finished artwork.
- Tips are short articles, and brief programming routines. Your tips can aid other computer users.

All submissions will be acknowledged and the copyright in such works which will pass to Arnie Computers Publications Ltd will be paid for at competitive rates.

Send a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can. All work for consideration should be sent to:

Paul Skidrot, Home Computing Weekly,  
Box 1, Colson Square, London W12 8AD

## T199/4A Cassette Software

Which UK Software House:  
Has supported T199/4A Owners  
longer than any other?  
Has retained over 5 Star reviews  
in Home Computing Weekly than any  
other TI supplier? (H141: 25)  
Sells not only games, but also  
handy utilities?

## STAINLESS SOFTWARE

### As seen on TV:

Have you seen the Gold and  
Dials on tv? I have excellent  
TI Basic simulations for just  
£6.00 each. HCM gave them both  
5 Star reviews! \*\*\*\*\*

Modest packaging, great programs,  
reasonable prices... for a classic  
computer.

1,000+ MORE PROGRAMS FROM THE TI SUPPLYING WITH MORE  
FIVE STAR REVIEWS FROM OUR OWNERS!

SEND A LARGE STAMPED SELF ADDRESSING ENVELOPE FOR AN  
ILLUSTRATED CATALOGUE  
(Please send a self-addressed reply coupon to)

STAINLESS SOFTWARE, (Proprietor: S Shaw)

## Penman

BBC or any machine with RS232 or RS423

Penman plotter 1999, cable for BBC: £50, entry pack £25, plotting paper £10.50 VAT must be added to all prices

Penman Products, 4 Alportwood Close, Garsdale Way, Huddling BN14 5NP

Is it a mouse? A turtle? A printer? A plotter? It's a Penman and it can do all these things!

In the race to find something new and useful add-ons, this product is likely to be a real winner. Its main function is as a printer/plotter, but it doesn't print or plot in the usual way. Most printers are designed so more a print head of some type across a fixed piece of paper — not the Penman. With this machine the paper is fed flat on the desk, and the print head walks across the surface, drawing as it goes.

This might seem like just another twist of the kind you find recommended for young children to use with a LOGO language pack. The penman can be used in this way, too, and has a special hole which holds a pen at the centre of rotation for just such a use. But this is really, much more than a rattle for it has a full character set and can be used to print text, as well as diagrams, using an advanced three-colour plotting feature. With the addition of mouse modules this has to be one of the most flexible and potentially useful add-ons on the market.

# Penman or mouse?

What is there the Penman can't do? It's a mouse, turtle, printer and plotter all in one. Dave Carlos checked it over for you

Examples of Penman plotting

But what is it like? Well, from the photos above here you can see it certainly does work very well as a printer/plotter. I tried it with all types of plotting paper and the trace was very clear and accurate. I always test a plotter by making it trace the same pattern twice on the same piece of paper and measuring its accuracy. The Penman isn't suitable for this test, since each time you tell it to plot or plot it goes to find the edge of the paper and, using a pair of optical sensors, starts the plot at slightly differing places. The only problem I had in this respect was that new pens tended to smudge a little, but this soon wears off.

The Penman must be used

with good quality paper and the pen is quite expensive. It must also be used on a good hard surface, as flat as possible. I used the optional plotting plate and this made life very easy.

Software is an essential. It contains all the routines you might need and all the drawings here were generated using the package. Of all the direct routers supplied the nearest is the most difficult to use but you can get the hang of this too. If you want to use this in a real turtle, the Advanced LOGO pack for the BBC can drive this one very easily. If you want to program your own routines you can scrape segments just as you would with an ordinary printer. The manual could be a little more helpful in this respect, though.

While I cannot see many people buying one of these machines as a toy, they are well designed and built and will be ideal in schools and business applications where this type of product is desired. I have no hesitation in recommending the product.

D.C.

Penman robot plotter

Pick the flowers in the garden — but watch out for deadly toadstools. You'll need swift reactions to be a success. By Paul Twigg

# Come into the garden, Maude

Are you fed up with TI games which pause for thought each time you press a key? This program was written to solve this problem.

All you have to do is pick the flowers, avoiding the toadstools. Sounds simple? It's not. You can't stop moving and you need nimble fingers to get a high score.

Keys E and D have been used so you can use one hand and be

## How it works

100-110 set colour  
110-120 define chess  
120-130 set screen  
130-140 instructions  
140-150 set up screen  
150-170 main routine  
170-180 pick flower  
180-190 pick toadstool  
190-200 game over  
200-210 play again?  
210-220 bonus scoring

1200-1220 print all routine  
1220-1230 screen, main routine

Comments for other machines: Could be simple in the program, is simple

CALL CLEAR clear the screen  
CALL HCHAR print a  
CALL VCHAR print a  
CALL GCHAR screen FREE  
CALL CRAM user defined  
graphics line codes

## Variables

A: score  
B: spin counter  
C: column number  
N: bonus score counter

## quicker

The amount of flowers remains constant but the toadstools increase in number as the game progresses. They can crop up where you least expect them, so watch your step!

## Diana Smith explains how to simulate the SCREEN\$ function on your ZX81 with a short machine code routine

One of the features missing on the ZX81 is SCREEN\$. On the Spectrum, SCREEN\$ is used either to save the display on tape as a block of code or to read a character position on the display.

When used to fetch a character from the screen, it works like an inverted PRINT AT statement, giving the code of the character at a specified line and column on the screen. This operation can be done fairly simply by PEEKing the display file. However, fetching a character of characters using BASIC is rather slow.

The machine code routine given below speeds up the operation considerably and saves characters from the display into a variable so that they can be SAVEd.

Firstly, it helps to understand how the ZX81 display file is structured. In the UK ZX81, there is at a minimum and at switch-on the display consists of a NEWLINE marker followed by an end-of-line NEWLINE for each of the 24 lines of the screen.

This means the display file is only 24 bytes long. As characters are put on the screen, the file expands to accommodate them. When a RUN peak of more than 74K is added, the display file is automatically expanded to at least one, that is a NEWLINE marker and 24 lines of 32 spaces, each ending with a NEWLINE end-of-line marker.

To illustrate this, consider the following two BASIC statements.

```
10 LET SCREENSTART=
  PEEK 16384+256*PEEK
  30 PRINT CHR$
  PEEK(SCREENSTART+1+C*32)
```

Line 10 looks up the value in the system variable @PEEK and stores its value in the variable SCREENSTART. This holds the address of the first byte of the display file and will be the first NEWLINE

character. Line 20 prints the character which is at column C and line L of the display. This fast gives the equivalent of PRINT SCREEN\$(L,C).

Now that the line number is multiplied by 32 to allow for the NEWLINE character at end of each line. Try this on using the column and line numbers on page 125 of the manual. Remember to print something on the screen first from within a program. It won't work as a direct command because the screen will be cleared first!

Table 1 is a disassembly of the short machine code routine used to transfer the display file to a string array. The machine code routine presented here is only for use on a ZX81 with sufficient memory to get a fully expanded display file. It will transfer 24 lines of 32 characters into a string array which will be the first defined variable. By transferring the characters to the first variable in memory, we avoid the need to include a screen routine. The lines are limited to 32 so that you can copy data back to the screen using the BASIC PRINT command rather than another machine code routine.

The first version of the routine finds the address of the start of the variables area which is held in the system variable VARS and goes on to find the first character of the array. Page 124 of the manual explains this step.

It then finds the address of the first byte of the display file, steps over the NEWLINE character and then transfers the next 32 bytes of the display file into the first 32 bytes of the array. The code then repeats the operation and 23 lines have been transferred.

Key to the machine code of Table 1, using the decimal codes given in Listing 1. Make sure the R1M2 maximum at line 1 contains at least 34 characters. RUN this program which will prompt you with the address of the next byte to be entered. Key in the byte value corresponding to the address on the screen followed by NEWLINE.

Repeat until all the code has been entered. When all 34 bytes have been input, you will get the repeat 0-70. Let the program

and enter lines 10 to 30. Key CLEAR NEWLINE and save the code as SCREENS.

Test the routine by keying in Listing 2. Then CLEAR the variables area so that A0 is the first defined variable and can be found by the routine. This string array will hold the characters which make up the screen.

Lines 1, 30 and 31 should always be the first three lines of

a program using the routine. Indeed it is a good idea to save these lines as SCREENS rather than just line 1.

Lines 30 to 31 produce an example screen. Line 30 sets the routine which then transfers the display to A0. Line 31 shows the screen and line 32 repeats it as a fraction of the time it took to set up originally.

If you save SAYE Listing 2, the screen display will also be saved as the variable A0. Should you want to store a number of screens in your program, you should first transfer the contents of A0 to another array. Calling the routine again will transfer another screen into A0. You can repeat this as often as you like until you run out of memory.

Table 1. Disassembly of SCREENS

| Address    | Machinecode | Comment               | Byte value |

## Alice in Videoland CBM 64 £8.95

Adalogics, PO Box 41, Reading  
Berk

This isn't so much a game as a collection of games. There are four games, which are loaded from tape separately. They are linked by the Alice theme, and also by the fact that your score on one game sets off your character in another.

You start with a tale against which charts. After clearing the White Rabbit. The first game is Alice falling down the hole, collecting keys, bottles and cakes. There have to be used to enable her to pass through doors on the wall. The second game also involves levelled and bar-fence and making home then under the watchful gaze of the Cheshire

Cat and the Cheshire. There's also a game chess board, and a game of strategy against the Jabberwocky and the Tweedle. Finally, there is a game of memory, which is quite tricky.

The graphics and sound of Alice are superb. The games are as good as you could expect, considering that you are doing all them for just money. The worst feature is the design between games, if you have a disc drive, it's a bit worth paying extra for a tape interface.

## Mentice 48K Spectrum £2.50

Freelink, Worthington Hall, Upper  
St Martin's Ln, London WC2H  
7DL

If you've always wanted to put a whooper outside on a speaker's stand then Mentice has just

You are the class rascal and while teacher's back is turned, you plant sticky things on his chair, to plant distractions in the other kids' desks to get them into trouble. You are portrayed to the class next, I let her walk past me. The whooper, apart from bumping into you and taking you a little, it is most useful on teacher's desk. You can plant a game disk in it the more often if you hang into sticky people you lose a life and one of you has in front of the first row of desks where teacher never turned.

Apparently the school can make an appearance and because you'll see your progress, but I never reached the, as the game demands a few degrees of skill.

I still marve for originality and humour. The product is good also. The art and sound is top-notch and the game components, however I should mention to start a stickler from most people.

## P.C. Fuzz CBM 64 £7.95

Aurora, Unit 40, Victoria Ind  
Est, Watford Rd, Watford, Herts

There are few things more amusing than trying to make regularly rain you at one of your few lives while giving you a chance to fight back, dodge or whatever.

This is one of those games that has a character, who is rather oddly named as it says, but a really funny old-sounding and immediately brings home up before you've had time to think. On their account while the character is an empty space rather than on top of a bomb, your character of explosion as this by pressing a few keys without some fairly slow.

The trouble is that your hero's character consists of nothing more than a character. According to the instructions, who is very thoughtfully provided in five different languages, the trouble is which one is chosen is controlled by pressing the fire button to produce a rain either forward or diagonally forward and upwards, neither of which is much help when a bomb is creeping up behind you.

The graphics are rather nice but the game is too limited in scope for my liking, besides being, impossibly difficult to play.

# Crazy characters

If you want to take on the role  
of a crazy creature, then try  
some of these games

## Billy Ball to the Rescue

Schulze, 10 Adams St, Stockport

Some deviants has gone into the world of the controls in the keyboard controlled mouse game. The chosen key-up easily pronounced for operation by both hands. The instructions are given, though mostly on paper, the character is clear.

The hero, Billy Ball, is set to rescue just three balls. It's a bit weird: the ball is the number seven, or better half. She has been imprisoned in a tower - and we are told why - and Billy, who seems to be a monkey (mentioned in a Pictorial with its mouth open, has to become more often with its mouth open and see her free.

As part of the game, there progress is far, while the major

part of the game involves moving left to right across the screen, and choosing the right mouse button to press to avoid incoming missiles. As certain points Billy has to pump vertically instead of moving forward to wall, and the battle is not well presented, making good use of the Extended BASIC loader for Spectrum. The graphics have been well designed and good use of a wide of colour. The words Extended BASIC.

## Frenzy CBM 64 £7.95

North Pole, Sherrin Ltd  
Sherrin St South, Leeds

Simple games often result in excellent ideas - here's a good example though owners of the will recognise the theme.

Everything starts easily enough with the mouse button, moving round the walls of your project hole. You must press to walking up corners of the hole and eventually the bottom wall of the house has the mouse will just you're working on before it's completed, then they give a life. There are two kinds of ball, slowly started progress are worth more than the filled area.

As well as power for the area captured and before being, there is a time limit for speed completion of each screen. On the second screen, it shows capture and tracks you round the walls - much more, but equally linked as the house. With further screens, more degrees and more changes appear until there are five of each to save with.

Although it is a game for quick thinking, it is not really dependent on speed. Lessons always become in 40 degrees of walls, so strategy and planning are possible, and very valuable. One for one in what makes it to play.

# Think before you move

Each time you move you colour a square red. Careful not to box yourself into a corner — you'll have to have all your wits about you. By Gary Todd

Largest thought is what is this game for the unspoiled VIC-20? What you must do is guide your character round a grid. Each time you pass over a square you colour it red.

Once a square is red, you cannot pass back over it. You must be careful not to trap yourself in a corner, and to add to your problems, a ship is firing red squares. You could easily find yourself in a maze, if you're not careful!

#### Here are some ideas

The main problem with this is the VIC's ROMs. Location 5475 is normally set to 00, but location 5476 sets base of sound. Location 5479,4 sets sound and border to black. The screen is built up the screen primary starts at location 7140-7143, which must be changed to test your computer.

#### Here it works

Load up an screen and variables to play Greenstones.  
000 POKE 1000,0 to screen,  
step 00 to 1000

100-150 joystick routine  
000 screen step left to right,  
to bottom of screen  
070 joystick ship step from  
400-450 checks if ship is trapped  
460 prints, wait  
500 goes back to line 100  
550-580 responds to joystick  
right, if ship can move right,  
step to ship  
700-730 responds to joystick  
down  
750-780 responds to joystick left  
800-830 responds to joystick up  
850-880 ship stepped routine  
9000-9090 fires red square from  
ship to random height and dist  
9100-9140 colour characters  
9150-9190 prints instructions  
9200-9210 done for Greenstones

#### Variables

SC high score  
H3 high score  
X position of ship  
Y position of ship  
P1, P2, H1, H2, M joystick  
C variable  
number of columns man  
positioned  
F decides when ship fires  
M number added to position of  
something on screen memory  
step to give a value

```

**We've got  
£1,400-worth  
of prizes on  
offer this week.  
You could win  
two great  
games from  
Hewson  
consultants**

We've got an extra treat for you this week — £1,400-worth of prizes are on offer to owners of Spectrum and Amstrad computers. One hundred winners will each receive two games, Technician Ted and Hardware International Air Traffic Control, from Hewson Consultants' popular range Technician Ted comes £9.95 on the Spectrum and £7.95 on the Amstrad CPC464, HIA7C is priced at £7.95 for both computers.

Technician Ted is an exciting

# Technicians wanted

escapee on a steam ship factory. You play the part of the technician who can't even manage to climb an infinite problem. It's an arcade adventure with 50 screens and according to Hewson Consultants 'the graphics are extremely clear and sharp'.

In your role as Ted, you attempt to complete four day 8 tasks to the satisfaction of the fabled General and the Redoubtable man. The game was written by Steve Hernandez and David Cooker who both have first-hand experience of working in a mainframe room. Let's face it, the odds that they work with are more optimistic than Ted's.

HIA7C plays an enormous weight of responsibility on your shoulders as you take charge of the class above HIA7C are International Airport. The author is a professional AIC at Heathrow so his choice of tasks should find the program very realistic.

The game features Concord radio messages and rapid aircraft in-

tercept the excitement is a peak. Your task is to land 10 aircraft safely. This job is very complex and has been broken down into different levels of expertise.

Both two of the Amstrad computers, an alternative version based on Spectrum Argon, Amstrad's reputation of Hewson.

Ma, if you have a sense of humour and a sense of responsibility, these games are for you. (Even now, you could be one of the lucky 100).

## How to enter

Send the big envelope — there are a number of differences between them. Give the differences on screens 10 and the correct and correct it to the correct. Write clearly the number of differences you found on the back of the envelope.

For your entry to Hewson Consultants' Competition, Home

Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date is at 11.00 on Friday February 8 1981.

You may enter as many times as you wish, but each entry must be on an official coupon — not a copy — and sealed in a separate envelope. Important please follow carefully the instructions on obtaining identification coupons and return an envelope with no numbers on the back cannot be considered. If you are a winner, the coupon will be sent as a label to send your prize, so clear writing is essential.

## The rules

Prizes will not be accepted from employees of Argon Systems, Pavilion City, Home Computers and others on Prizes and lots. The following also apply to employees, families and friends of the companies.

For how to enter rules from page 10 of this.

SIGNATURE OWNERS. THE OFFICIAL  
SIGNATURE JOURNAL

The L30 kit has everything you need to turn your Spectrum into the sleek new Spectrum+. You don't even need an understanding of electronics, just the ability to spider a few wires together. The result is the full power, clear step-by-step instructions.

By now, you have almost surely heard it said: "I don't want to pay more money for my car than I can get for it later." Well, we've got a solution for you.

Whichever you decide on, you'll also receive the new 101-page User Guide, and *Consumers' Choice*.

## The biggest, best: Spectrum

The ligand + monomer ( $10^{-3}$  M) in  $\text{CH}_2\text{Cl}_2$  has a large hyperfine shift compared with free radical ions.

You'll find the new keyboard has a smooth positive action - ideal for touch typing, word processing, simulation programs, and extended programming sessions. This noticeable key-give is perfect typing feedback.

There are 56 keys in all, including 17 new keys. Programmers will be pleased by new dedicated punctuation keys, a space bar and separate shift keys for graphics and standard modes. And, it costs

button allows you to clear a program from your computer's memory without deactivating the power supply.

**The official Researcher's Handbook**

Naturally, your upgraded computer will accept all the peripherals in your earlier system. Interface 1 will connect your mouse, as well as all

1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 2680, 26

Just as important, new legislation will be designed with the "Spaceman + a Friend" for the federal approach with: strict laws, new capabilities, and new potential for the future.

included) – the new Spectrum + User Cards and Comparison Chart.

The new User Guide has over 300 pages of information including a handy M&E dictionary. The Companion Console provides an interactive tour of the new keyboard, and includes three additional on-line manuals.

**THE CHAIRMAN OF THE BOARD**

When ordering the Aggrate license, send off your Mail Speech, and the address below carefully wrapped together with the completed coupon and appropriate payment. Please do not return the main adaptor manual or other accessories. Your agreed computer will be dispatched to you within 10 days of receipt of your order.

When ordering the Upgrade Kit, simply complete the coupon, enclosing the appropriate payment and post it to us at the address below. Please allow 4-6 weeks for delivery.

**Free Phone:** Agents at Barclaycard Holders can call Cardcenter (1-800-667-6671) for personal attention. Same as from Monday to Friday. Only the Upgrade Kit can be ordered by phone.

Please note: the upgrade offer applies to working 40K, 45K-50K, 55K-60K, 65K-70K, 75K-80K, 85K-90K, 95K-100K, 105K-110K, 115K-120K, 125K-130K, 135K-140K, 145K-150K, 155K-160K, 165K-170K, 175K-180K, 185K-190K, 195K-200K, 205K-210K, 215K-220K, 225K-230K, 235K-240K, 245K-250K, 255K-260K, 265K-270K, 275K-280K, 285K-290K, 295K-300K, 305K-310K, 315K-320K, 325K-330K, 335K-340K, 345K-350K, 355K-360K, 365K-370K, 375K-380K, 385K-390K, 395K-400K, 405K-410K, 415K-420K, 425K-430K, 435K-440K, 445K-450K, 455K-460K, 465K-470K, 475K-480K, 485K-490K, 495K-500K, 505K-510K, 515K-520K, 525K-530K, 535K-540K, 545K-550K, 555K-560K, 565K-570K, 575K-580K, 585K-590K, 595K-600K, 605K-610K, 615K-620K, 625K-630K, 635K-640K, 645K-650K, 655K-660K, 665K-670K, 675K-680K, 685K-690K, 695K-700K, 705K-710K, 715K-720K, 725K-730K, 735K-740K, 745K-750K, 755K-760K, 765K-770K, 775K-780K, 785K-790K, 795K-800K, 805K-810K, 815K-820K, 825K-830K, 835K-840K, 845K-850K, 855K-860K, 865K-870K, 875K-880K, 885K-890K, 895K-900K, 905K-910K, 915K-920K, 925K-930K, 935K-940K, 945K-950K, 955K-960K, 965K-970K, 975K-980K, 985K-990K, 995K-1000K, 1005K-1010K, 1015K-1020K, 1025K-1030K, 1035K-1040K, 1045K-1050K, 1055K-1060K, 1065K-1070K, 1075K-1080K, 1085K-1090K, 1095K-1100K, 1105K-1110K, 1115K-1120K, 1125K-1130K, 1135K-1140K, 1145K-1150K, 1155K-1160K, 1165K-1170K, 1175K-1180K, 1185K-1190K, 1195K-1200K, 1205K-1210K, 1215K-1220K, 1225K-1230K, 1235K-1240K, 1245K-1250K, 1255K-1260K, 1265K-1270K, 1275K-1280K, 1285K-1290K, 1295K-1300K, 1305K-1310K, 1315K-1320K, 1325K-1330K, 1335K-1340K, 1345K-1350K, 1355K-1360K, 1365K-1370K, 1375K-1380K, 1385K-1390K, 1395K-1400K, 1405K-1410K, 1415K-1420K, 1425K-1430K, 1435K-1440K, 1445K-1450K, 1455K-1460K, 1465K-1470K, 1475K-1480K, 1485K-1490K, 1495K-1500K, 1505K-1510K, 1515K-1520K, 1525K-1530K, 1535K-1540K, 1545K-1550K, 1555K-1560K, 1565K-1570K, 1575K-1580K, 1585K-1590K, 1595K-1600K, 1605K-1610K, 1615K-1620K, 1625K-1630K, 1635K-1640K, 1645K-1650K, 1655K-1660K, 1665K-1670K, 1675K-1680K, 1685K-1690K, 1695K-1700K, 1705K-1710K, 1715K-1720K, 1725K-1730K, 1735K-1740K, 1745K-1750K, 1755K-1760K, 1765K-1770K, 1775K-1780K, 1785K-1790K, 1795K-1800K, 1805K-1810K, 1815K-1820K, 1825K-1830K, 1835K-1840K, 1845K-1850K, 1855K-1860K, 1865K-1870K, 1875K-1880K, 1885K-1890K, 1895K-1900K, 1905K-1910K, 1915K-1920K, 1925K-1930K, 1935K-1940K, 1945K-1950K, 1955K-1960K, 1965K-1970K, 1975K-1980K, 1985K-1990K, 1995K-2000K, 2005K-2010K, 2015K-2020K, 2025K-2030K, 2035K-2040K, 2045K-2050K, 2055K-2060K, 2065K-2070K, 2075K-2080K, 2085K-2090K, 2095K-2100K, 2105K-2110K, 2115K-2120K, 2125K-2130K, 2135K-2140K, 2145K-2150K, 2155K-2160K, 2165K-2170K, 2175K-2180K, 2185K-2190K, 2195K-2200K, 2205K-2210K, 2215K-2220K, 2225K-2230K, 2235K-2240K, 2245K-2250K, 2255K-2260K, 2265K-2270K, 2275K-2280K, 2285K-2290K, 2295K-2300K, 2305K-2310K, 2315K-2320K, 2325K-2330K, 2335K-2340K, 2345K-2350K, 2355K-2360K, 2365K-2370K, 2375K-2380K, 2385K-2390K, 2395K-2400K, 2405K-2410K, 2415K-2420K, 2425K-2430K, 2435K-2440K, 2445K-2450K, 2455K-2460K, 2465K-2470K, 2475K-2480K, 2485K-2490K, 2495K-2500K, 2505K-2510K, 2515K-2520K, 2525K-2530K, 2535K-2540K, 2545K-2550K, 2555K-2560K, 2565K-2570K, 2575K-2580K, 2585K-2590K, 2595K-2600K, 2605K-2610K, 2615K-2620K, 2625K-2630K, 2635K-2640K, 2645K-2650K, 2655K-2660K, 2665K-2670K, 2675K-2680K, 2685K-2690K, 2695K-2700K, 2705K-2710K, 2715K-2720K, 2725K-2730K, 2735K-2740K, 2745K-2750K, 2755K-2760K, 2765K-2770K, 2775K-2780K, 2785K-2790K, 2795K-2800K, 2805K-2810K, 2815K-2820K, 2825K-2830K, 2835K-2840K, 2845K-2850K, 2855K-2860K, 2865K-2870K, 2875K-2880K, 2885K-2890K, 2895K-2900K, 2905K-2910K, 2915K-2920K, 2925K-2930K, 2935K-2940K, 2945K-2950K, 2955K-2960K, 2965K-2970K, 2975K-2980K, 2985K-2990K, 2995K-3000K, 3005K-3010K, 3015K-3020K, 3025K-3030K, 3035K-3040K, 3045K-3050K, 3055K-3060K, 3065K-3070K, 3075K-3080K, 3085K-3090K, 3095K-3100K, 3105K-3110K, 3115K-3120K, 3125K-3130K, 3135K-3140K, 3145K-3150K, 3155K-3160K, 3165K-3170K, 3175K-3180K, 3185K-3190K, 3195K-3200K, 3205K-3210K, 3215K-3220K, 3225K-3230K, 3235K-3240K, 3245K-3250K, 3255K-3260K, 3265K-3270K, 3275K-3280K, 3285K-3290K, 3295K-3300K, 3305K-3310K, 3315K-3320K, 3325K-3330K, 3335K
